Submission Guidelines

Computational Communication Research

Aims and Scope

CCR is an open access, online only journal that encourages and facilitates the sharing of 1) developments in computational tools and methods, and 2) the application of computational methods to answer theoretical questions about (human) communication.

CCR welcomes the publication of:

- Traditional full-length articles (max 9,000 words) as well as short communications (3,000 – 4,000 words). Computer science and some social science outlets (e.g. Political Analysis or APSR) commonly publish articles in the 3000-4000 word range. Results can often be interesting without lengthy theoretical reflections.
- Descriptions of novel tools, methods, and data sets, provided they are valid, well documented, and relevant to communication research.
- Explorative and null findings, provided they are theoretically relevant and methodologically rigorous.
- Tutorials (including code examples) that explain the usage and best practices of a particular tool or method in communication research.
- Software or tool announcements. This is a very short (2-3 page) paper that essentially describes the overall goal of the software and gives a short explanation of how it can be used. These announcements go through editorial review only so they can be published very quickly. The publication will make it clear that it has not been peer reviewed and that no full code review or audit has been performed.

CCR is funded primarily through sponsorships and donations. CCR does not charge a subscription fee and does not currently charge a mandatory article processing fee. See the open access and sponsors pages for more information.

Login or **Register** to https://computationalcommunication.org/ccr make a submission.

Submission Preparation Checklist

As part of the submission process, authors are required to check off their submission's compliance with all of the following items, and submissions may be returned to authors that do not adhere to these guidelines.

1) The submission has not been previously published, nor is it before another journal for consideration (or an explanation has been provided in Comments to the Editor).
2) The manuscript follows APA style (7th edition) for manuscript, references, and figures; and all illustrations, figures, and tables are placed within the text at the appropriate points, rather than at the end.
3) The text adheres to the stylistic and bibliographic requirements outlined in the Author Guidelines.
4) The manuscript is fully anonymized.
5) The manuscript includes an abstract of up to 200 words.
6) During submission, in step 3 (Metadata) the field "In Browse Lists" should be checked for all authors

Author Guidelines

Please follow the instructions below when submitting your manuscript. Feel free to contact us at info@computationalcommunication.org for any questions about scope, format, or procedures around submissions.

- For all submissions, follow APA style (7th edition) for manuscript, references, and figures.
- If using Latex, please use the apa7 class set to manuscript mode.
- Include an abstract that should generally not exceed 200 words.
- Use American English.
- Submissions should not contain information that identifies the author. Self-citations are permitted, but where obvious replace by (Author, 2017).   Latex users can also use the mask option of the apa6 class and use the \maskcite command. External links to identifiable resources such as authors' github repositories should be removed from the initial submission. Please make sure the filename and file properties do not contain your name.
- Research articles should be at most 9,000 words in length (including bibliography and tables)
- Research notes should be at most 4,000 words and should focus on describing empirical results. They should contain a short theoretical introduction to link the research with the relevant communication science theory, but references and theoretical discussion should be kept to a minimum.
- Descriptions of novel tools and data sets should be at most 4,000 words and describe a publicly accessible and novel (or major revision of a) tool or data set relevant to the communication science community. The manuscript should contain a link to the tool or data in question and describe the relevance and intended working and purpose of the tool or data. For tools, code examples or screenshots describing common use cases are encouraged.
- For publishing software tools, please refer to the Nature editorial "Does your code stand up to scrutiny?" (Nature 555, 142, 2018) and checklist.
- For publishing data, please archive the data in a repository that guarantees persistence.

- For both tools and data, the repository or archive may be kept private until acceptance, but should be publicly accessible on publication of the description. If the tool or data cannot be made accessible due to business, legal, or ethical constraints, please contact the editor before submitting the manuscript.

Privacy Statement

We take your privacy seriously and will only use your information for contacting you related to your role as author, potential reviewer, or editor (as applicable). Your registration information will be retained for inviting you as future reviewer unless you ask us to delete it. The information will not be shared or sold to any third parties.

Publication Ethics

Amsterdam University Press and the editors of *Computational Communication Research* endorse the COPE (Committee on Publication Ethics) guidelines and will pursue cases of suspected research and publication misconduct (e.g. falsification, unethical experimentation, plagiarism, inappropriate image manipulation, redundant publication). By submitting an article for review to this journal, the editors and the publisher will understand the author agrees to adhere to the principles and practices as set out in AUP's Ethics and Malpractice statement. For further information about the COPE principles on publication ethics, please see http://www.publicationethics.org.

Copyright

Authors keep the copyright to their articles but are required to sign a Consent-to-Publish form based on the CC-BY-NC-ND license. You can download the form from the AUP website here.

It is the author's responsibility to seek permission for the use of any copy-righted materials from the rights-holders and pay for any fees required. If in doubt if permission is needed, please contact the publisher (details below).
